

Home Energy Saving Tips

No/Low-Cost Tips

- Set your dishwasher to “air-dry”
- Wash clothes in cold water
- Use a clothesline to dry laundry
- Replace lights with LED fixtures
- Add low-flow sink/shower aerators
- In winter, use a car block heater timer set to 2 hours before use
- Reduce summer AC use by using a fan and opening windows at night

TOP 5 POWER-USING APPLIANCES

(kWh/yr for a 4-person household)

Source: SaskPower [Home Power Use Tool](#)

Moderate-Cost Tips

- Get a condensing (ventless) dryer
- Replace old fridges & freezers with new energy star models
- Seal obvious air leaks around doors, windows, pipes, and vents
- Install a drain water heat recovery pipe
- Get a programmable or smart thermostat and set it lower at night and when out of the house
- Use small appliances for cooking (e.g. microwave/air fryer) when possible over large ones (ovens)

Big Impact Retrofits

- Replace an inefficient furnace/boiler with a new energy star model or with a heat pump
- Install an energy recovery ventilator (ERV), then seal all air leaks
- Replace single/double windows with triple-pane low-e argon-filled
- Add insulation to walls, attics, and floor
- Get a heat pump water heater
- Install rooftop solar
